PROFILE

I enjoy solving challenging problems. I am a strong troubleshooter who learns best when faced with challenge. I bring ideas to life with creativity and full stack development skills.

TECHNICAL SKILLS

HTML5
CSS
JavaScript
jQuery
Node.js
React
Ruby
Rails
Express
MongoDB
API
Git
Express
SQL
MongoDB
Firebase

Adobe Photoshop
Adobe Lightroom

Education

William Paterson University
Wayne NJ | 2009 - 2014
BS. Computer Science

EXPERIENCE

Software Developer
Movie Busters | New York, NY | 2017

In this project I developed an application to solve one problem, find a place where users could log in, rate movies and add them to their favorites page. Administrators needed to have an administrative page where they could add and remove movies from the database.
Programming Language : (React.js, Node.js, Firebase Authentication/Database and CSS)

Full-Stack Development T.A
NYCDA | New York, NY | Present

In this role, I teach web immersive students front and Backend languages and frameworks to help introduce them into the world of web development. Languages such as HTML, Javascript, JQuery, React Framework, Node.js and Ruby on Rails are some languages touched upon through the immersive program. By the end of the program students are competent programmers able to write DRY code and develope fully functional web applications.

Full-Stack Development Immersive
General Assembly | New York, NY | 2016

Developed web applications Individually and in a team environment. I was responsible for writing clean and efficient code. I used both front and back-end frameworks, libraries, databases and hosting environments. Github and command line was extensively used for all my projects.

- **Tech Jobs**
  Developed with React.js as a web application that allows developers to seach for jobs via programming languages or job title and displays the results on the DOM. This application uses AuthenticJobs API.
  Languages used: React.js, Javascript, Ruby on Rails, Authentic Jobs API, Axios.

- **DrinksOnUs**
  This web application uses React.js and Absolut API, which allows the user to search for information on drinks either by name or base liquor. In addition, it allows for user authentication, so each user can create an account, login and save any drink to their account .
  Languages used: React.js,React Router, Materialize, Firebase, Javascript, Ruby on Rails, Authentic Jobs API, Axios.

SQL/ Software Developer | Medassets, Saddle River, US | 2015 -2016
During my time at MedAssets, I gained experience in dealing with large quantities of data from hospitals in various file formats such as FTP, txt, excel among others. Also developed web pages using languages like HTML, CSS and Javascript.

- I migrated data from the sources and performed Extract, Transform, Load (ETL) processes on them using SQL Server Integration Services(SSIS). In this stage I performed data validation, formatting and migration of the clean data onto staging databases using various forms of package deployment from SSIS where I then loaded it to production using SQL Server Management Services.
- I managed database replicationof multiple client databases using SQL Server 2008R2 and SQL Server 2012.
